

Web Summit 2016

DataLabor.Com was selected for the BETA class to present revolutionary software HyperSpace Management Platform

It is with great pleasure and pride that DataLabor.Com has learnt to be selected as a Beta at Web Summit 2016.

DataLabor.Com is an artisan company specialized in software development that will present two advanced solutions:

HyperSpace Management Platform

Hyperspace Management Platform is a revolutionary business management platform to self create management applications such as ERP, CRM, WCMS.

Users with no peculiar experiences, will be able to create their application from scratches, or starting from a preconfigured template (ERP, CRM, Warehouse, Sales, Production, ...).

EDP manager and technical users could have access to an evolved developing tool that grant a way to create with no limitations new management application with data embedded or taken from external sources.

Thanks to a friendly author environment, you can configure and adapt it quickly to your needs: you can easily add new table or new field and you can quickly create new views able to adapt to various contexts of use or workgroups.

Hyperspace Management Platform has a test environment that is isolated from the data environment, and enables to check all updates to tables structures and data access, before allowing them to pass to the production environment.

The strengths of Hyperspace Management Platform are Advanced User Interface, Dynamic Chunking, User Group Manager, Client Integration, Media Manager, Macro, Print Merge, Communication Center, Level Security, Self Management.

Hyperspace Management Platform is a web application that can be used both in intranet and extranet and mobile environment.

Hyperspace WCM

Hyperspace Web Content Management is a powerful Web Content Management solution to share and centralize the distribution of web content.

From one internet application it will be possible to manage published web content and to merge information with data gathered from cloud services.
